GENERAL RULES

10. Meter Reading and Billing - Continued

10.4 Maximum Demand

For Customers billed under SC 1 Rate V and SC 2 Rate III, maximum as-used daily demand values, where applicable, shall be determined by calculating the highest integrated 60-minute demand ending in each day and being entirely comprised of intervals ending in the same time period. Such Customer's monthly maximum demand shall be determined by calculating the highest integrated 60-minute demand during the billing period in which such use is made. For all other Customers billed under Standby Service rates and/or Buy-Back Service rates, maximum as-used daily demand values, where applicable, shall be determined by calculating the highest integrated 30-minute demand ending in each day and being entirely comprised of intervals ending in the same time period. Such Customer's monthly maximum demand shall be determined by calculating the highest integrated 30-minute demand for the billing period in which such use is made. Unless otherwise indicated elsewhere in this Rate Schedule, for all other Customers, the maximum demand shall be the highest 30-minute integrated demand occurring during the billing period in which such use is made.

Whenever service is terminated to a Customer's premises and the same Customer applies for, and receives, service at the same location, within what would have been the same billing period, but for the termination in service, the maximum demand for the billing period shall be determined as though there had been no termination of service.

An account with more than one meter will be billed for demand in accordance with General Rule 10.8.

Whenever electric service of the same or different characteristics is supplied through two or more watthour meters under a single agreement the Company may compute the maximum demand, in lieu of installing a demand measuring device, for any watthour meter which has not registered more than 360 kilowatthours per month in 2 consecutive months during the preceding 12 months, on the basis of 0.1 kilowatt for each 18 kilowatthours of registered consumption during a monthly billing period
